

Weishaupt Monarch oil burners Sizes 5 to 11

1/2002 CA

– weishaupt –

Description, Types of regulation, Model overview

– weishaupt –

Weishaupt Monarch oil burners are of the fully automatic pressure atomizing type. Their design has been carefully considered down to the smallest detail and has been proven to be successful over and over again. They meet all the demands for safety, reliability and low cost operation.

The burners are distinguished by a variety of excellent features:

- Larger range of application
4 - 127 GPH (600 - 18,500 MBH)
- Automatic sequence of operations
- Stable fan characteristics - good combustion results
- Air damper closed on burner shutdown
- Quiet operation
- Complete pre-wired integral switchgear/ ISG version (except for RL, RMS and L10T three stage burners)
- Hinged burner casing
- Combustion head can be pulled out when the burner is hinged open (sizes 9 to 11)
- The design of the burner makes installation, adjustment and servicing easy

Construction

All the components are assembled in one unit. The motor drives the fan and the fuel pump. All the equipment used for the regulation of fuel and air is clearly arranged and easily accessible. The burners can be hinged open to the left or right, which simplifies service work on the combustion head, diffuser, nozzles and ignition electrodes.

Application

The burners can be used on hot water boilers, steam boilers, air heaters and for various heating processes. RL and RMS burners are preferably used where there is a continually changing heat demand.

Fuels

Light oil #2 to Heavy oil #6 fuel.

Viscosity:

Types Monarch L and RL -

up to 6 cSt (6 mm²/s) at 68F (20°C)

Type Monarch M -

up to 75 cSt (75 mm²/s) at 122F (50°C)

Types Monarch MS and RMS -

up to 50 cSt (50 mm²/s) at 212F (100°C)

Regulation

On L, M and MS type burners, the regulation of oil and air takes place as follows:

- two stage, nozzle head with two nozzles and a motor controlled, quickly opening air damper.
- three stage, with three nozzles and a motor controlled, slowly opening air damper.

For RL and RMS burners, fuel and air are controlled in compound. The burner can, depending on the controller and servomotor, be either:

- sliding two stage
(servomotor with 20 s running time)
- modulating
(servomotor with 42 s running time)

With sliding two stage regulation, the low and high fire positions are fixed within the burner operating range. The burner slides to one position or the other, depending on the appliance demand, and there are no rapid changes of fuel throughput.

By utilizing a suitable controller, the burner can be operated in modulating mode. Modulating burners operate at any point within the capacity range, depending on the heat demand.

On sliding two stage burners and modulating burners, the slow capacity alteration ensures a particularly good matching to the demand of the heating appliance.

Flame safeguard

The burner flame safeguard automatically sequences the operations and monitors the flame optically via the flame sensor. For burners without inbuilt switchgear the flame safeguard is supplied loose for mounting in the control panel.

No interference with radio and television reception

Radio interference created during ignition is below the permitted limits specified by the relevant EMC standards and regulations.

Nozzle recirculation system on residual oil burners

During prepurge on residual oil burners, heated oil flows through the nozzle head and oil line system. This ensures that evenly heated oil is available for flame establishment.

Air/gas separator

Oil circulation tank

Patented air/gas separators or oil circulation tanks are always required and should always be quoted with the burner.

When using an air/gas separator or oil circulation tank, the preheated oil supplied through the return line is mixed into the flow to the burner. This results in an energy saving as only partial heating of the fuel oil is required.

Operation of a two pipe system is possible when using heavy oil and a single burner, providing the suction vacuum does not exceed 55 PSI (4.0 bar). If several burners are supplied by a ring main via an air/gas separator or oil circulation tank, it is necessary to have manual ball valves which equipped with limit switch immediately downstream the air/gas separator or oil circulation tank. Air/gas separators and oil circulation tanks should be selected to suit the pump capacity of the ring main and the burner size. When selecting the ring main pump stations, please ensure that the rating is one and a half times to twice that of the nozzle rating.

Air/gas separators and oil circulation tanks must be located close to the burner.

Quiet operation

Weishaupt burners operate quietly. All air handling burner parts have been aerodynamically designed, the fuel / air mixing noise is reduced to a minimum and rotors and fan wheels are dynamically balanced. For installations where special emphasis is placed on burners with low noise levels, sound absorbers which considerably reduce burner noise are available (see brochure "Sound absorbing shrouds for Weishaupt burners", print No. 13).

Combustion of heavy oil

The oil throughput of type MS and RMS heavy oil burners, referenced to the nominal capacity, must not be less than 27.5 GPH (100 kg/h). Furthermore the use of RMS type burners is recommended when combusting this fuel.

Permissible ambient conditions

In standard version (materials, construction, protection), the burners are suitable for use indoors only and as such should not be installed outside. Permissible ambient temperatures are between 14°F and 104°F. Burner installed in unheated areas is subject to particular measures in certain circumstances (please enquire).

Special versions

Numerous special variants, for example burners in marine version or for use on process plant are available on request.

Nomenclature of burner type

Sliding two stage or modulating regulation

RL 8/2 - ZM D

Two stage regulation (Z)

- Oil is released at start when solenoid valve 1 and the safety solenoid valve open.
- High fire is reached when solenoid valve 2 opens.
- The capacity is regulated by the opening and closing of solenoid valve 2.

Three stage regulation (T)

#2 light oil burners only

- Oil is released at start when solenoid valve 1 and the safety solenoid valve open.
- High fire is reached when solenoid valve 3 opens.
- The capacity is regulated by the opening and closing of solenoid valves 2 and 3.

HF = high fire, LF = low fire, IGN = ignition, IF = intermediate load

Sliding two stage and modulating regulation (ZM)

- When the nozzle needle and safety solenoid valve open, the right quantity of oil for ignition is released (except RL5).
- A slow running servomotor adjusts the oil regulator up to high fire.
- The burner capacity is regulated between low and high fire by opening and closing the oil regulator.
- Sliding two stage burner servomotors have a running time of 20 s and modulating burner servomotors have a running time of 42 s. For modulating operation an appropriate modulating controller is required, which is to be installed in the control panel.

Sliding two stage

Modulating

Scope of delivery

No.2 light oil and No.6 heavy oil burners

– weishaupt –

Monarch L light oil burner

Monarch L #2 light oil burner

Two stage burner

- Burner housing
- Hinged flange with limit switch
- Flange gasket
- Sight glass
- Burner motor
- Fan wheel
- Pump
- Two solenoid valves and one safety valve
- Oil hoses
- Nozzle assembly with two nozzles
- Combustion housing
- Air regulation housing with air damper and servomotor
- Ignition unit
- Ignition cable
- Ignition electrodes
- Burner flame safeguard with flame sensor
With or without inbuilt switchgear/ ISG
(see page 6 for ISG version)

Three stage burner

The specification varies from that of the two stage burner as follows:

- Three solenoid valves and one safety valve
- Slow running servomotor
- Nozzle assembly with three nozzles

A separate control panel is required for size 10 burners.

Monarch M/MS heavy oil burner

Monarch M/MS #6 heavy oil burner

Heavy oil burners also include:

- Oil preheater
- Recirculation nozzle assembly
- Thermometer
- Heating cartridges (in the nozzle assembly, distributor piece, pressure switch and solenoid valves)
- ROB regulator
- Pressure switch
- Filter
- Stainless steel oil hoses

A separate control panel is required for size MS9 Z burners.

– weishaupt –

Monarch RL #2 light oil burner

Regulating, sliding two stage and modulating burners

The specification varies from that of the two stage burner in the following points:

- Servomotor for oil / air regulation with regulating cam
- Oil regulator
- Nozzle assembly with spill back nozzle
- Two control solenoid valves
- Pressure switch
- Panel mounted burner flame safeguard. Inbuilt switchgear not available.

Modulating burners also require an optional panel mounted modulating controller.

A separate control panel is required for burner sizes RL5 to RL11.

Monarch RL light oil burner

Monarch RMS #6 heavy oil burner

Heavy oil burners also include:

- Oil preheater
- Recirculation nozzle assembly
- Thermometer
- Heating cartridges (in the nozzle assembly, distributor piece, pressure switch and solenoid valves)
- ROB regulator
- Filter
- Stainless steel oil hoses

A separate control panel is required for burner sizes RMS7 to RMS11.

Monarch RMS heavy oil burner

Components

– weishaupt –

Complete integral switchgear (ISG) on two and three stage Monarch L type burners

Burners with inbuilt switchgear have all the necessary components for burner operation:

- 1 Stage 1 control switch with lamp
- 1 Stage 2 control switch with lamp
- 1 Contactor
- 1 Overload relay

Adjustable and removable combustion heads

No one boiler is the same as another and yet one burner should perform economically on all boilers. The position of the combustion head and diffuser relative to each other can be adjusted. The burners are this way suited to the combustion chamber conditions.

There is a further advantage for burner sizes 9 to 11. With the burner hinged open, the combustion head and combustion head support can be removed through the hinged flange.

– weishaupt –

Hinged burner casing

The hinged flange offers many advantages. Combustion head, nozzles and ignition electrodes are easily accessible, which simplifies installation and servicing. The burner can be hinged open once the central screw on the burner flange is removed. The design of the heating appliance may require a combustion head extension (e.g. reverse flame boilers). In this case the burner can be hinged open only after disconnecting the ignition and oil lines.

Oil temperature regulation

Heavy oil burners are equipped with an oil preheater (electric or media preheater). The oil is quickly heated to the required atomizing temperature, due to the large heat exchanger's surface combined with a relatively small oil volume. The rapid heat distribution prevents local overheating and carbonization of the oil. Weishaupt manufactures electric and media preheaters as well as combined electric/media preheater assemblies (further information on page 28).

Burner fuel systems

–weishaupt–

M5Z

MS7Z to MS9Z

RMS7 to RMS11

■ Burner models RL5 - RL7

Both the solenoid valves marked (3) are electrically connected in series, as are both solenoid valves marked (5). Solenoid valves (3) and (5) in the return line are installed against the direction of oil flow.

■ Burner models RL8 - RL11

Solenoid valve (6) in the flow and (7) in the return are electrically connected in series. Solenoid valve (7) in the return is installed against the direction of flow.

■ Burner models M5Z, MS7Z - MS9Z, RMS7 - RMS11

Solenoid valve (5) / (6) in the flow and (5) / (7) in the return are electrically connected in series. Solenoid valve (5) / (7) in the return is installed against the direction of flow.

Index

- 1 Pump
- 2 Solenoid valve type 7121ZBG1KRT0 Coil 9 W (normally closed) G 1/8
- 3 Solenoid valve type 121K2423 Coil 19 W (normally closed) G 1/8
- 4 Solenoid valve type 122K9321 Coil 19 W (normally open) G 1/8
- 5 Solenoid valve type 121K6220 Coil 20 W (normally closed) G 1/4
- 6 Solenoid valve type 321H2322 Coil 20 W (normally closed) G 3/8
- 7 Solenoid valve type 121G2320 Coil 20 W (normally closed) G 3/8
- 8 Two stage oil nozzle assembly (without integral shut off device)
- 9 Three stage oil nozzle assembly (without integral shut off device)
- 10 R nozzle assembly (without integral shut off device)
- 11 Two stage M nozzle assembly (with integral shut off device)
- 12 R nozzle assembly (with integral shut off device in flow and return)
- 13 Restricting orifice
- 14 Filter
- 15 Oil regulator
- 16 Oil preheater
- 17 0 - 10 bar (0 - 145PSI) pressure switch in return (set to 5 bar (72.5PSI) for #2 oil, 7 bar (101.5PSI) for #6 oil)
- 18 Temperature sensor

Burner selection - rating / combustion chamber pressure

Monarch types L and RL

–weishaupt–

Size 5

The capacities in relation to combustion chamber resistances are maximum values, which were measured on test flame tubes.

All ratings data given relate to an air temperature of 68°F (20°C) and an installation height above sea level of 1,640 ft (500 m).

Size 7

Voltages and frequencies

As standard the burners are suitable for three phase AC available with various voltages from 208 - 600V, 60 Hz. Other voltages and frequencies available on request.

Burner motor standard version

Insulation class F, IP54 protection.

Modulating burners

The modulating burners are based on the sliding two stage burners. The modulating feature is possible by utilizing a suitable modulating controller which is to be installed in the remote control panel (also see page 3).

Standard burners without integral switchgear (ISG)

On burners without integral switchgear, the burner flame safeguard is supplied loose. Optionally, it can also be mounted on the burner. A terminal strip is provided in both cases.

① For capacity over 72 GPH (250 kg/h) oil : Pump
TA2 in lieu of J7

② For viscosity ≤ 152 cSt (152mm²/s) at 122F
(50°C): Oil preheater EV2C

③ For burners over 75 GPH (270 kg/h) oil:
Oil preheater WEV2.2 in lieu of EVD2D - see
special equipment.

④ For burners over 82 GPH (300 kg/h) oil:
Oil preheater WEV3 in lieu of WEV2.2 - see
special equipment.

⑤ For sliding two stage (ZM) burners:
SQM 10.15561 servomotor (20 sec)
For modulating (M) burners:
SQM 10.16561 servomotor (42 sec)

⑥ With integral switchgear
Prefusing/overload relay
D.O.L. start

⑦ Without integral switchgear
Motor protection switch
D.O.L and YΔ start

Special equipment

Monarch L, M and MS, two and three stage

– weishaupt –

No.	Description		5 Order No.	7 Order No.

Weishaupt MV media preheaters

– weishaupt –

Type MS7Z with EV2D and MV9C

Type MS7Z with MV9C

Type RMS8 with EV2D and MV9C

Oil connection parts for media preheaters with electric preheater

- 2 20" (520 mm) long hoses
- 1 ball valve
- 1 precision thermometer
- 1 thermometer holder, unions and pipe connections

Oil connection parts for media preheaters without electric preheater

- 2 20" (520 mm) long hoses
- 1 temperature regulator with switch-over contact to release burner
- 1 temperature regulator and thermometer holder, unions and pipe connections

The units are high capacity forced circulation heat exchangers. Hot water, steam or thermal fluid can be used as a heating medium.

Media preheaters are used alone or in conjunction with an electric preheater.

If a medium of sufficient temperature is available, or if #2 oil is used, an electric preheater is not required. If the temperature of the medium is insufficient for preheating the fuel oil to atomizing temperature, the remainder of the heating process is carried out by an electric preheater.

Weishaupt media preheater is available with numerous fittings for different heating mediums.

Detailed information on the extent of delivery and arrangements is contained in a separate Weishaupt oil preheater brochure.

Weishaupt control panels and burner control system

– weishaupt –

Weishaupt control panels for

- two stage burners
- three stage burners
- sliding two stage burners and modulating burners

The basic control panels contain all burner controls, necessary for the operation of a burner.

Description

Weishaupt control panels conform to applicable national/international standards.

Switching includes

- Power supply
- Burner control
- Fan control
- Start-up/regulation
- Door mounted switches
- Door mounted indicating lamps

Individual customer requirements can be met at any time.

Weishaupt control technology for

- Boiler installations
- Thermal process equipment
- Ship/ Marine version
- Building management systems

Together with its core business of burners and heating systems, Weishaupt are able to offer complex control technology up to BMS level with PLC and DDC systems.

From planning to handover, tailor made solutions are available from one supplier.

Dimensions

—weishaupt—

Regular maintenance reduces heating costs and environmental pollution. Only a properly adjusted burner can save energy and be environmentally friendly. Behind each Weishaupt burner stands the whole Weishaupt customer service organisation. The outstanding efforts made in maintenance and service justify the enormous trust placed in Weishaupt's burners, for at Weishaupt product and customer service belong together.

Weishaupt customer service is there for you all year round. Whenever you need help, be it the supply of spare parts, technical advice or a site visit. We are there when you need us.
